Site Preparations

1. Ensure that the substrate is clean and dry. Remedy all protrusions or surfaces that are not flat. *For framed applications. Check that framing provides a flat, level surface. Repair or replace any warped or damaged framing.

2. Remove obstacles to the work area including all potential trip hazards.

3. Do not install during inclement weather.

4. Verify that ladders and/or scaffolding are in safe, working condition.

Recommended Products

FOAMULAR® 250
1” to 2” thickness to maximize comfort level

Accessory Products

Construction or duct tape

Basic Tools

- Tape measure
- Utility knife
- Straightedge
- 4”-6” thin blase knife

Protective Gear

- Cut-resistant gloves
- OSHA approved safety glasses

Project

Over Concrete Slab
Installation Instructions

1. Verify that the poly vapor barrier has seams overlapped 6”-12” and they are taped. Tape vapor barrier to perimeter wall.

2. Start in corner. Butt boards together down one side then continue to fill in the rest of the boards. Butt tightly and cut to fit perimeter courses.

3. If installing two layers, off-set the seams for the second layer starting in the corner.

4. Seams do not require sealing (tape). But pieces of tape (construction or duct tape) can be used to hold boards together and in place during the installation process.

Additional Considerations

• This product is not required to be installed by someone trained or certified by the manufacturer.

• As is, this product undergoes no chemical reaction and is in its final form when purchased. There is no need to evacuate the building during installation.

• FOAMULAR® cannot be in contact with hot surfaces such as chimneys or heat sources over 165 degrees F.

• Air Sealing—in applications that require air sealing, use Owens Corning® HomeSealR™ foam joint tape to seal joints between boards. Use Owens Corning® FlashSealR® foam flashing tape to seal FOAMULAR® to other substrates.

• Use HomeSealR™ to repair breaks. Replace foam into the board and then tape with HomeSealR™ to repair holes.

• Avoid leaving FOAMULAR® exposed for extended periods of time.

• For use in exposed applications refer to Code Evaluation Report UL-ER8811-01 and local building codes regarding the need for an ignition barrier.

• To cut boards to size, score with box knife then snap at the score

• Use a 4”-6” thin blade knife to cut holes or other penetrations through the FOAMULAR®
